

Disc-feeder for separate chicken parts

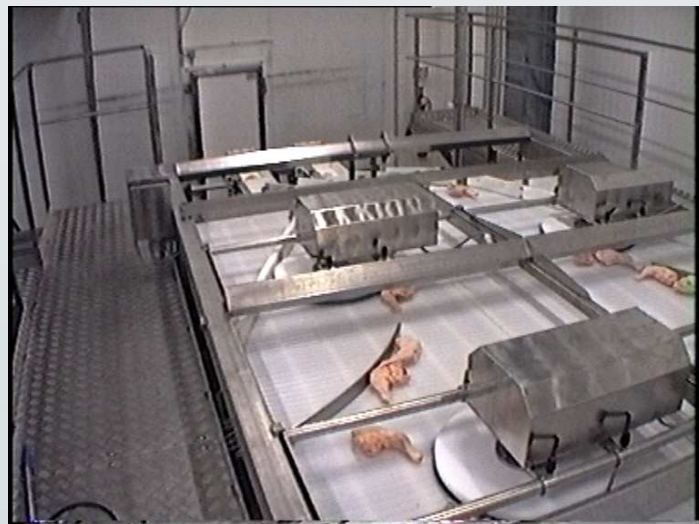

The HILLERSLEV disc-feeder is used for separating frozen chicken parts in connection to grading and packing.

Frozen chicken parts are taken directly from the IQF-freezer and are guided into one or more lanes and fed to grader or packing machine one by one.

The capacity of the disc feeder range from 60-100 pieces per min per line.

Construction:

The machine is made of welded stainless steel plate (SIS2333), and plastic materials suited for the food industry.
